Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the International Standards system for worldwide standardization. National bodies that are members of ISO and IEC participate in the development of International Standards through technical committees established by the respective organizations. Technical committees from ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental, in liaison with ISO and IEC, also take part in the work. In the field of product certification, the International Conformity Assessment (CASCO) is responsible for the development of International Standards.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 2. The draft International Standards are circulated to the member bodies for voting. Publication requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this document may be in conflict with national or local laws, regulations, administrative provisions or other binding legal requirements.

ISO/IEC 17067 was prepared by the *ISO Committee on conformity assessment (SCAR)*. It was circulated for voting to the national bodies of both ISO and IEC, and was approved by both organizations. This first edition of ISO/IEC 17067 cancels and replaces ISO/IEC Guide 67:2004. The following major changes have been made compared with ISO/IEC Guide 67:2004:

- a new [Clause 6](#) has been added, providing guidelines on setting up and operating a product certification scheme;
- some of the text originally in the main body of ISO/IEC Guide 67 has been moved to the annexes;
- the functional approach to conformity assessment has been emphasised;
- [Table 1](#) has been extended to reflect the functional approach;
- explicit provision has been made for type and batch certification schemes;
- references to ISO/IEC 17065:2012 have replaced references to ISO/IEC Guide 67:2004;
- the text has been made more concise in places.

Introduction

This International Standard describes the fundamentals of product certification and provides guidelines for the development of product certification schemes.
